

ABSTRACT

5

The present invention relates to a dielectric resonator antenna comprising a block (10) of dielectric material of which a first face intended to be mounted on an earth plane is covered with a metallic layer (11). According to 10 the invention, at least one second face perpendicular to the first face is covered with a partial metallic layer (12) having a width less than the width of this second face.

15 The invention applies in particular to DRA antennas for domestic wireless networks.
